

Please add the following new claims.

17. A mounting apparatus used for a flat panel display comprising:
a pivot fixed to a rear side of the flat panel display;
a supporting member pivotally secured to the pivot, the supporting member comprising a
first arm portion and a second arm portion where an obtuse angle is formed between the first arm
portion and the second arm portion;
wherein the second arm portion comprises openings for mounting the flat panel display to
either a wall or a ceiling.

18. The mounting apparatus of claim 17, further comprising a stand member disposed at
an end of the second arm portion of the supporting member.

19. The mounting apparatus of claim 18, wherein the stand member is made of rubber.

20. A mounting apparatus used for a flat panel display comprising:
a pivot fixed to a rear side of the flat panel display;
a supporting member for supporting the flat panel display, the supporting member
comprising a first arm portion and a second arm portion inflected with respect to the first arm
portion, where the first arm portion is pivotally secured to the pivot;

wherein the second arm portion comprises openings for mounting the flat panel display to either a wall or a ceiling.

21. The mounting apparatus of claim 20, further comprising a stand member disposed at an end of the second arm portion of the supporting member.

22. A display apparatus comprising:
a flat panel display;
a pivot fixed to a rear side of the flat panel display;
a supporting member for supporting the flat panel display, the supporting member comprising a first arm portion and a second arm portion inflected with respect to the first arm portion, where the first arm portion is pivotally secured to the pivot;
wherein the second arm portion comprises openings for mounting the flat panel display to either a wall or a ceiling.

23. The mounting apparatus of claim 22, further comprising a stand member disposed at an end of the second arm portion of the supporting member.
